DSD/ScanForce Multi-Bin Management

PRODUCT OVERVIEW

MANAGE WAREHOUSE INVENTORY LOCATIONS IN SAGE 100

When managing inventory, knowing **where** items are located is as important as knowing **how many** items are in inventory. Inventory levels drive the ability to service customers in a timely manner, as well as provide the data imperative to manage appropriate quantities in the warehouse.

The Multi-Bin Management solution provides advanced features for warehouse inventory management in Sage 100. Sage 100 currently allows for readily accessible inventory quantities, but with the addition of Multi-Bin Management, users can now find out where items are located in the warehouse.

The Multi-Bin Management solution is designed exclusively for Sage 100. It's an easy to use and easy to install location management solutions. Providing Sage 100 users detailed information on where items are located in the warehouse is paramount to managing inventory effectively.

DSD BUSINESS SYSTEMS ScanForce™

sage 100cloud

KEY FEATURES:

- Smart bin location numbers
- Enable Multi-Bin by Product Line, Company, Warehouse, or Item Code
- Manual, auto, or ScanForce allocation of items to bins
- Set allocation options based on data entry type
- View inventory and allocations by both item and bin
- Quick bin transfer and bin replenishment
- Maintain lot/serial expiration dates
- Advanced picking sheets and physical counts
- Detailed history and reporting

To fully realize the most efficient methods for inventory control and automation, it is crucial to have an in-depth view of inventory that a multiple-location management solution brings. Viewing items simply by warehouse is a thing of the past. Viewing items summarized by Warehouse Code combined with the detail of multiple locations within the warehouse is cutting edge. Use your Sage 100 system to the fullest extent!

POWERED BY SCANFORCE BARCODING SOLUTION
